

CoronaVirus

What You Need To Know About COVID-19

The 2019 novel CoronaVirus (COVID-19) is a new virus that causes respiratory illness in people and can spread from person to person. There is currently no vaccine to prevent COVID-19 infection. As with any airborne disease, the best way to prevent infection is to avoid being exposed to the virus. Take sanitary measures and utilize proper handwashing techniques. Ensure that your personnel and members are correctly trained and capable of implementing infection control procedures as defined by your organization.

Education is key to preventing illness.

E-Learning by McNeil & Company offers two online courses that can help you educate your organization on what they can do to help mitigate any exposure to the CoronaVirus.
